Project Title	Multi currency trading system
Students	Mr. Promphan CHaimongkol
	Mr. Kittichai Saenluang
Project Advisor	Mr. Kittinun Noymanee
Curriculum	Bachelor of Engineering
Major Field	Computer Engineering
Academic Year	2019

ABSTRACT

This project is intended to facilitate trade exchange between countries and to test the concept of balancing long-term relationship (Cointegration) by the trade as a "partner" with the Pair trading is considered a hedging techniques at the popular Pair trading is running under app.The basis of mathematical calculations. In the dating of stock trading coming together will have to pass through mathematical calculations. To appropriate and possible in the future profitability of the couple came by virtue of stock value to find economical Cointegration with Economic link by which the money 2 be Cointegrated when differences of 2 sets of data are Mean Reverting "is running around its own Mean values.

Expected to do by virtue of Trading value Pair Cointegration aid will make it possible to protect yourself from the market both up and down the legs, called "market neutral" because of the circumstances of the market, we will be able to make a profit from Long positions, and some from the Short position in the market's down, and even if we lose some, with Long and short positions postions can still make profits back to us. Make a financial (Money Management) that have effectively limited.
